

Connect your faculty to your library's resources

How does it work?

Using Curriculum Builder teachers can pull from all the resources your library offers to build their class reading list.

Your faculty searches your library's content from within the learning management systems (LMS).

Simply click "**Add to Reading List**" and selections are saved.

Faculty can create and manage course reading lists within your institution's LMS such as Canvas, Moodle, Sakai and others. The intuitive user experience makes this premium app simple for both teachers and students.

What are the benefits?

Curriculum Builder improves usage of your library's resources, access to research and decreases costs for students.

Curriculum Builder is easy-to-implement and cost-effective.

In fact, schools are saving their students money by making it easy for them to use free library resources instead of purchasing costly research materials. Load your class syllabus with e-books, journal articles and more right from your library. No expensive textbook required.

Curriculum Builder integrates with *EBSCO Discovery Service™* and *EBSCOhost®*.
