

_Prototyping

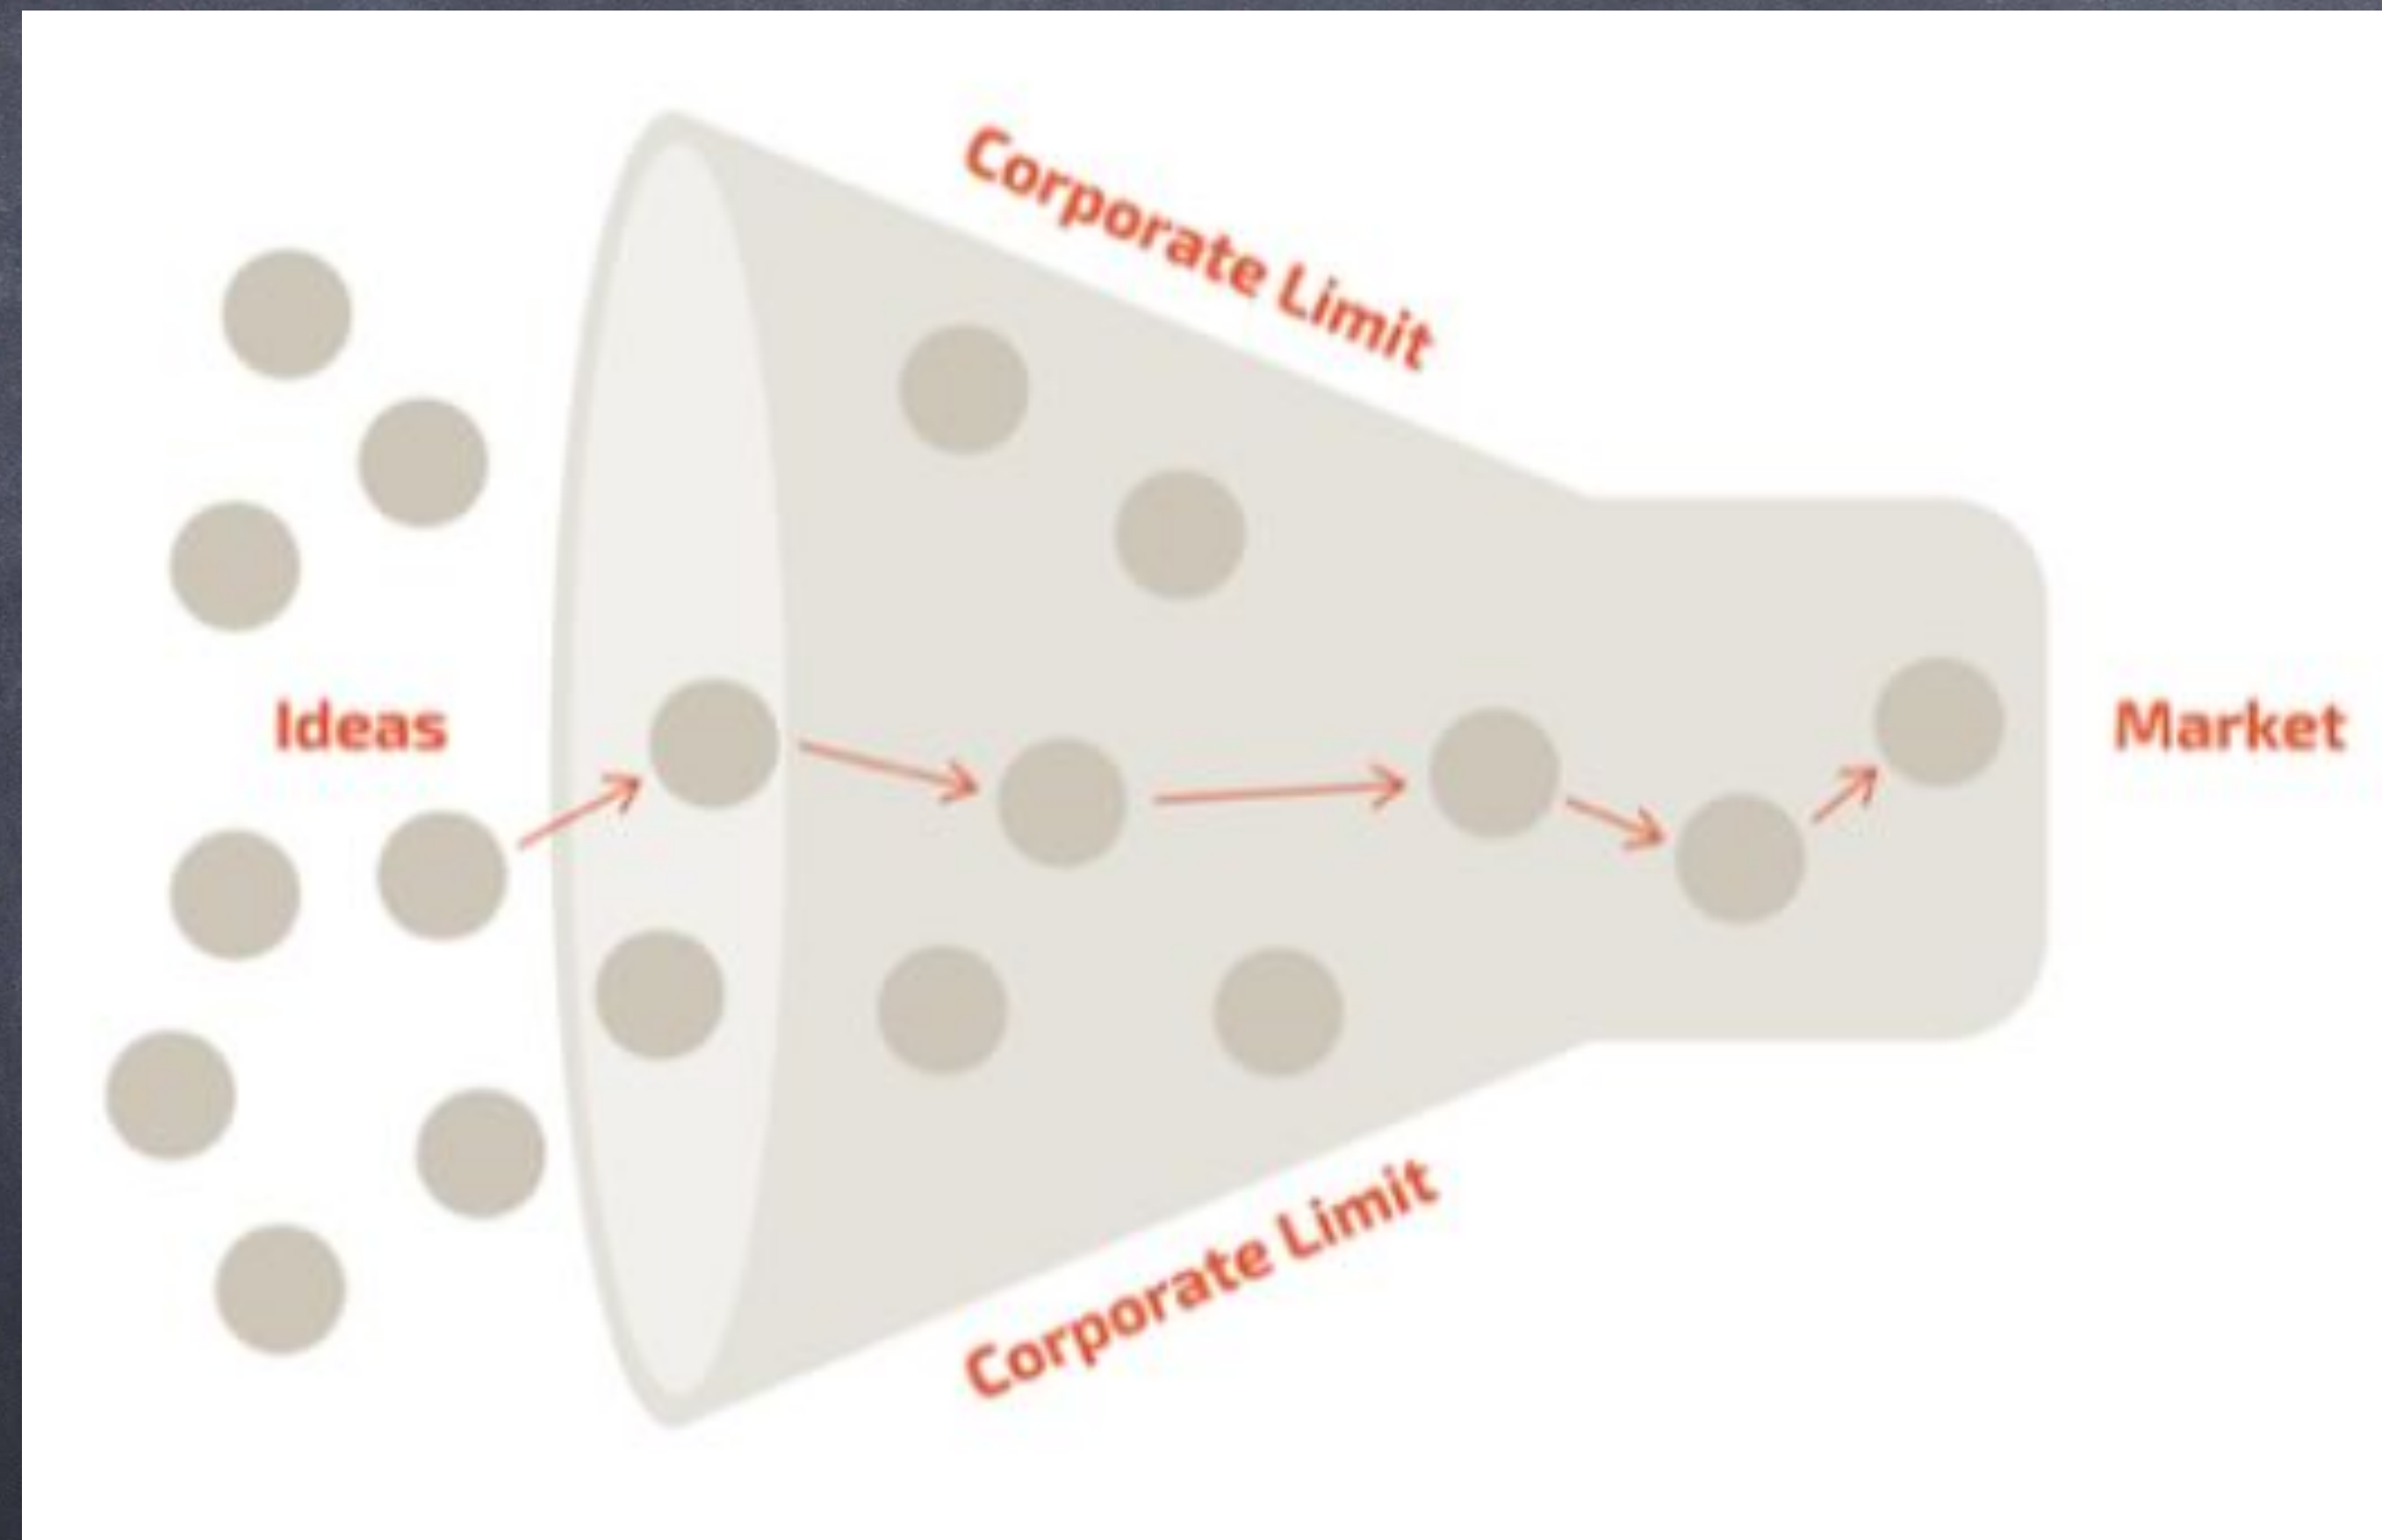

Abrão Kulaif | Week 12
Principles of Management | 2025

To recap: innovation

Innovation is a multifaceted and dynamic concept that encompasses the creation, development, and implementation of novel ideas, processes, products, or services to bring about positive change and value. It involves transforming inventive ideas into practical and valuable solutions that address specific needs, challenges, or opportunities.

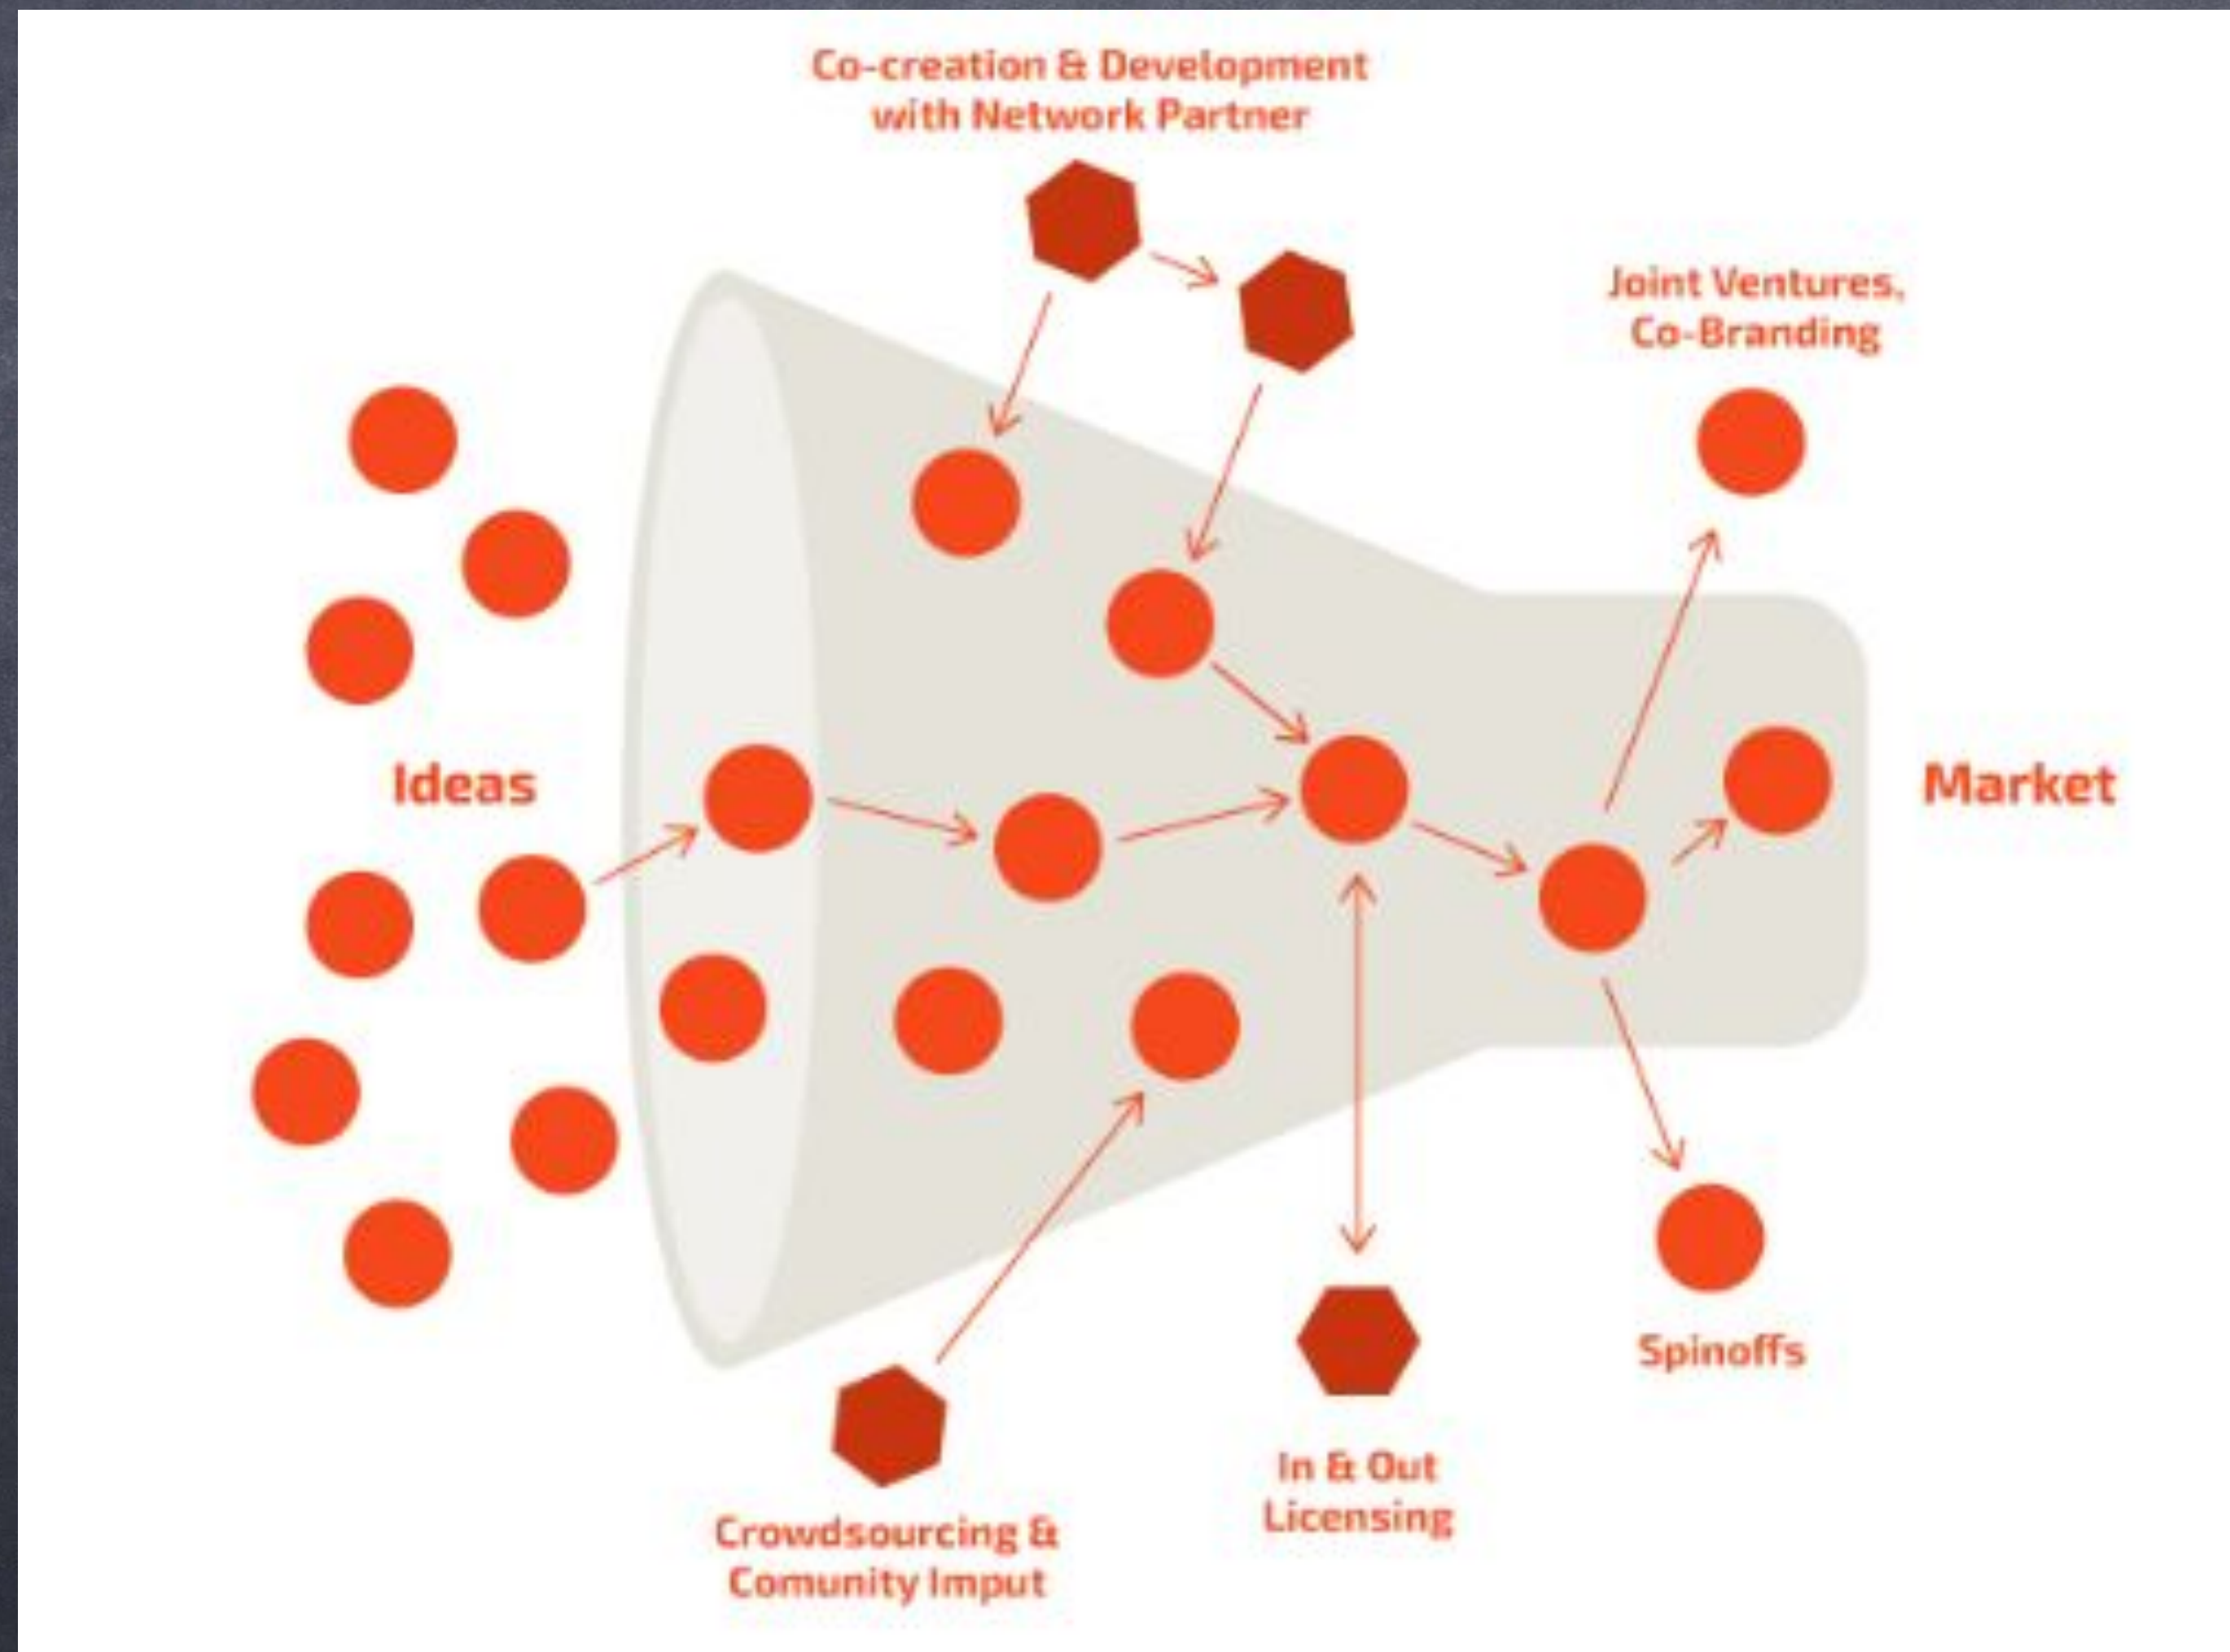

To recap: closed innovation

Vertical integration in which innovations are developed exclusively internally.

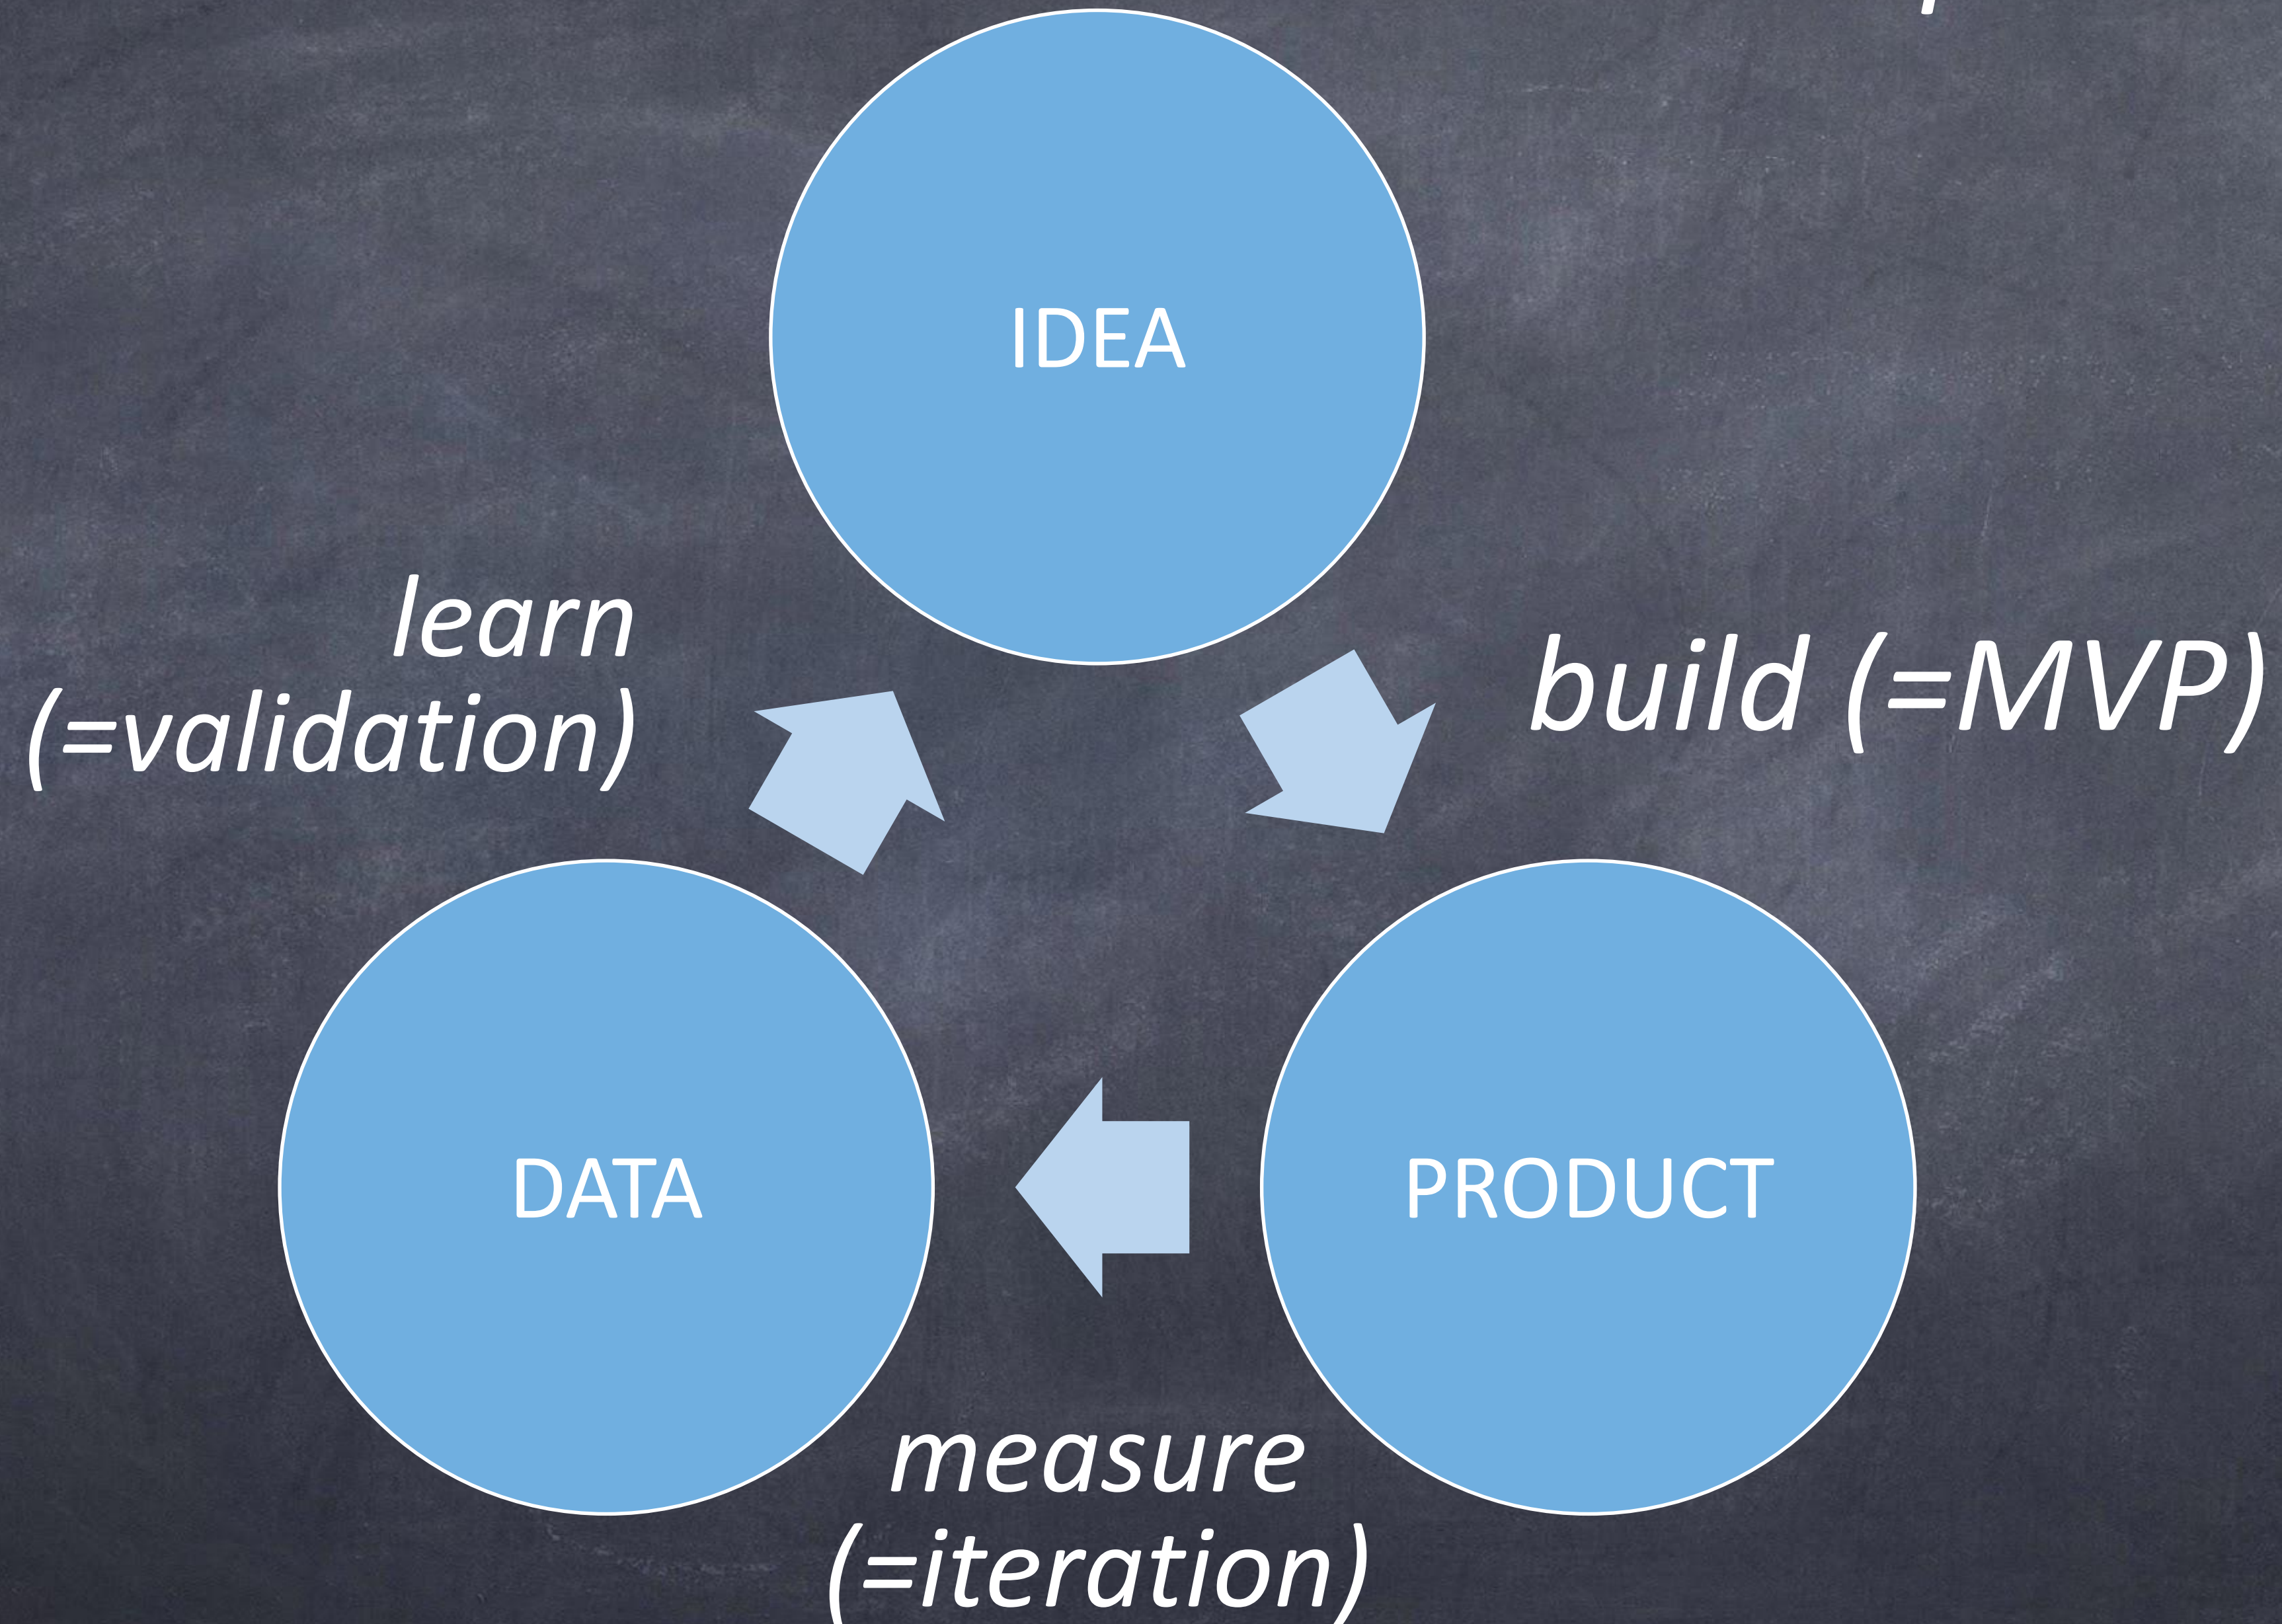

To recap: open innovation

No matter how effectively a company operates internally, the external knowledge networks and knowledge communities are relevant to the development of innovations.

To recap: lean startup

To recap

Innovation is a multifaceted and dynamic concept that encompasses the creation, development, and implementation of novel ideas, processes, products, or services to bring about positive change and value. It involves transforming inventive ideas into practical and valuable solutions that address specific needs, challenges, or opportunities.

Number of registered companies in Portugal

In thousands. Last # 493,068

Source: Banco de Portugal

Number of registered companies worldwide

In millions.

Source: Statista

And still...

...90% of startups fail within 3 years (!!!)

First of, why prototyping?

Key concepts

- ✓ Minimum Viable Product (MVP): basic version of the product to test key assumptions and get feedback

Key concepts

- ✓ Minimum Viable Product (MVP): basic version of the product to test key assumptions and get feedback
- ✓ Iteration: prototyping is an iterative process that involves testing and refining based on feedback

Key concepts

- ✓ Minimum Viable Product (MVP): basic version of the product to test key assumptions and get feedback
- ✓ Iteration: prototyping is an iterative process that involves testing and refining based on feedback
- ✓ Early adopters: the first users of the product. The ones with valuable feedback.

Key concepts

- ✓ Minimum Viable Product (MVP): basic version of the product to test key assumptions and get feedback
- ✓ Iteration: prototyping is an iterative process that involves testing and refining based on feedback
- ✓ Early adopters: the first users of the product. The ones with valuable feedback.
- ✓ Proof-of-concept (POC): prototypes normally serve to prove a concept about a product

11 m • Editado • 

The future of building startups:

- \$1M+ revenue per employee
- MVP speed (1x per month)
- AI-accelerated
- Superniche is the new niche
- Community 1st, software 2nd
- No-code 1st, some code 2nd
- 10x more automated
- Global teams, localized products
- Pop-up digital experiences (apps that only work on certain times)
- Needs the marketing holy-trinity to hit escape velocity: 1. product/market fit, 2. content/market fit and 3. community/market fit
- Team is half robots, half humans
- Accelerated by "boring marketing"
- Multiple revenue streams
- Design matters. The bar is high
- Partnered w/ creators (creators are the distribution)
- Feels like a game (levels, status, badges, in-app currency, challenges, collectibles/items)
- Purpose-driven moonshots: societal impact matters
- Product studios become the norm
- 99% of MVPs won't need VC

Food for thought
